

Instructions for installing and licensing ArcGIS Pro

Note: ArcGIS Pro is only available for Windows. Under Mac (Apple), Windows must therefore first be displayed in another way (e.g. Bootcamp or Parallels).

Licensing of ArcGIS Pro via a named-user licence:

With a named-user licence you can log in to ArcGIS Pro with login information (user name, password). You can obtain the login information from the RIM department on request. To create the account we need the following information (if you have more than one account, please send it as a CSV file):

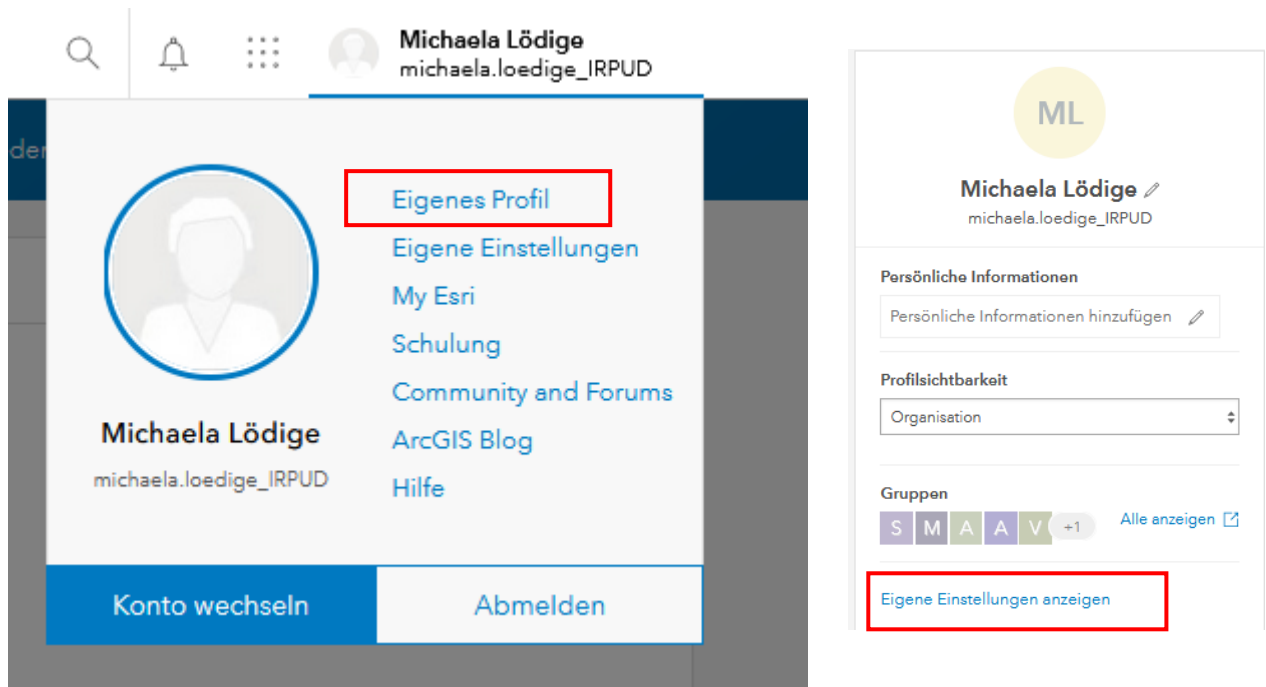

- First name
- Surname
- TU Dortmund - E-mail address,

which can be sent to Mathias Schaefer (mathias.schaefer@tu-dortmund.de) or Marius Trzecinski (marius.trzecinski@tu-dortmund.de). After creating an account, you will receive an e-mail with all user data, including a password. If you need an account for a course, such as "GIS in spatial planning", you do not need to make an individual request. The accounts will then be made available via the respective instructor.

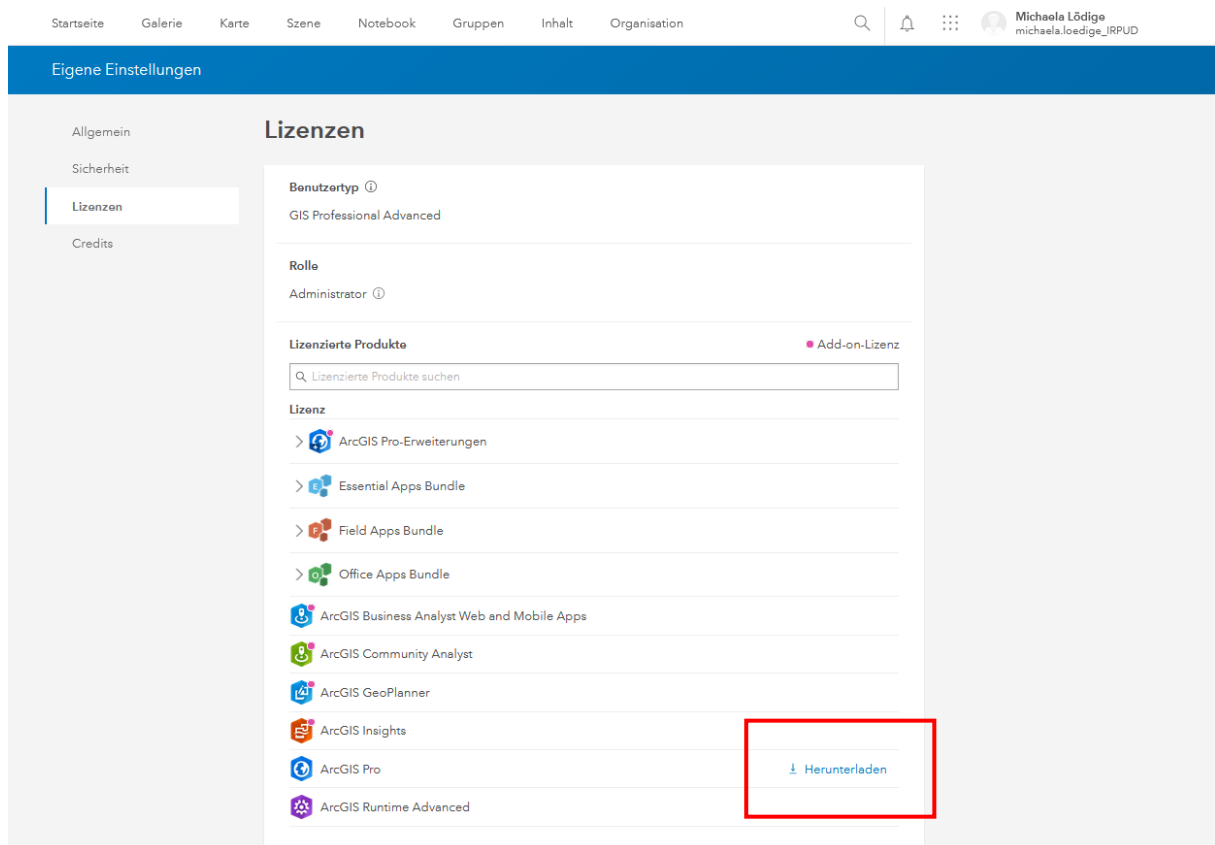

Download the installation file for ArcGIS Pro via ArcGIS Online

To install ArcGIS Pro you need an installation file (.exe). This is available in ArcGIS Online after successful account registration. Log in to ArcGIS Online (<https://www.arcgis.com/home/index.html>). You will be asked to enter a new password the first time you log in.

Select your own profile in the top right-hand corner and then click on Show my settings.

Under Licences you can download an installation file for ArcGIS Pro.

ArcGIS Pro

English (Version 2.7) ▾

↓ Herunterladen

Starten Sie nach Abschluss des Downloads das Installationsprogramm.

- > Dateidetails
- > Sie benötigen zusätzliche ArcGIS Pro-Downloads?

Note: The language can be chosen as desired, the exercise script for the course "GIS in Spatial Planning" is based on the English version.

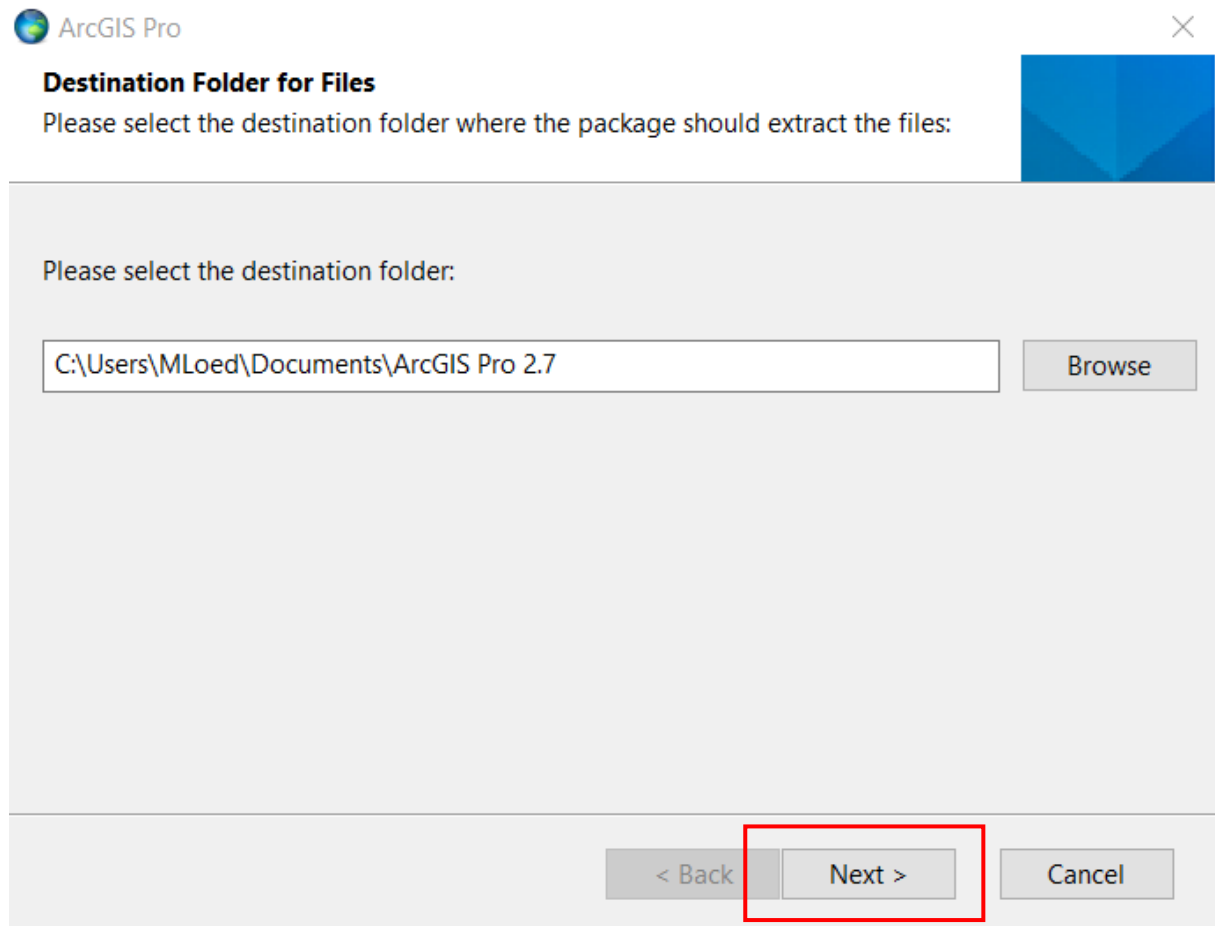

To obtain an installation file for the Data Interoperability Tool, please contact Mathias Schaefer (mathias.schaefer@tu-dortmund.de) or Marius Trzecinski (marius.trzecinski@tu-dortmund.de).

Installing ArcGIS Pro

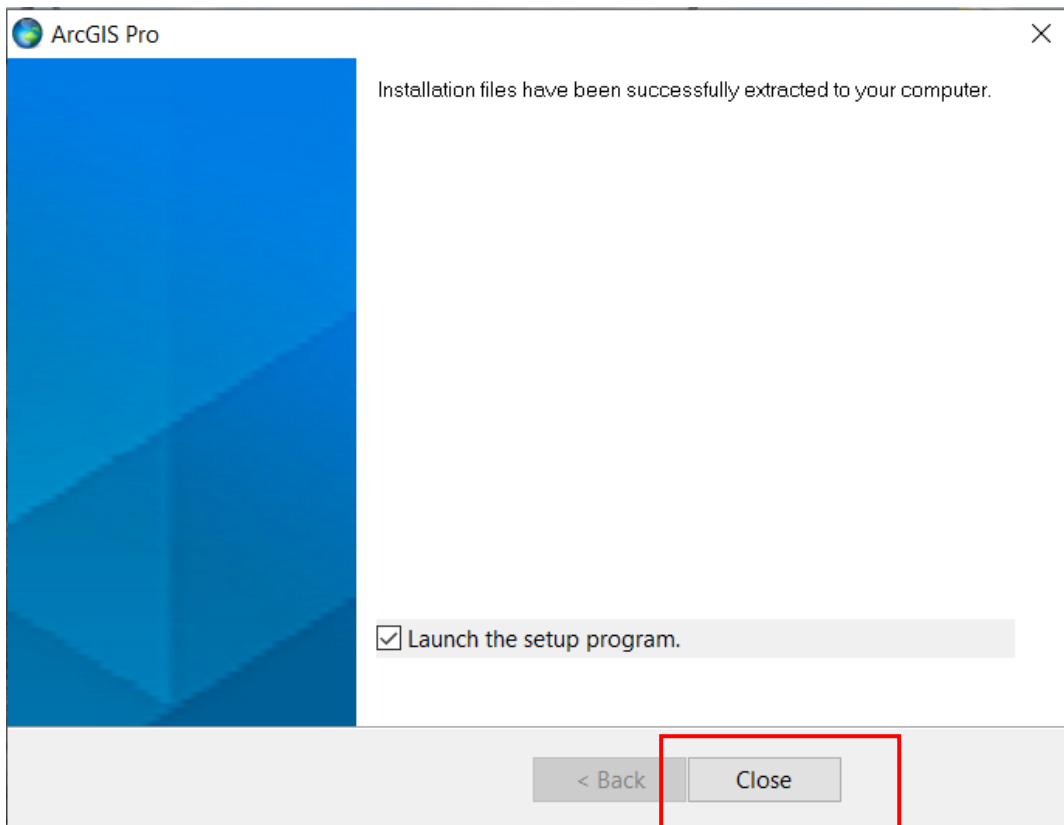

Open the downloaded installation file.

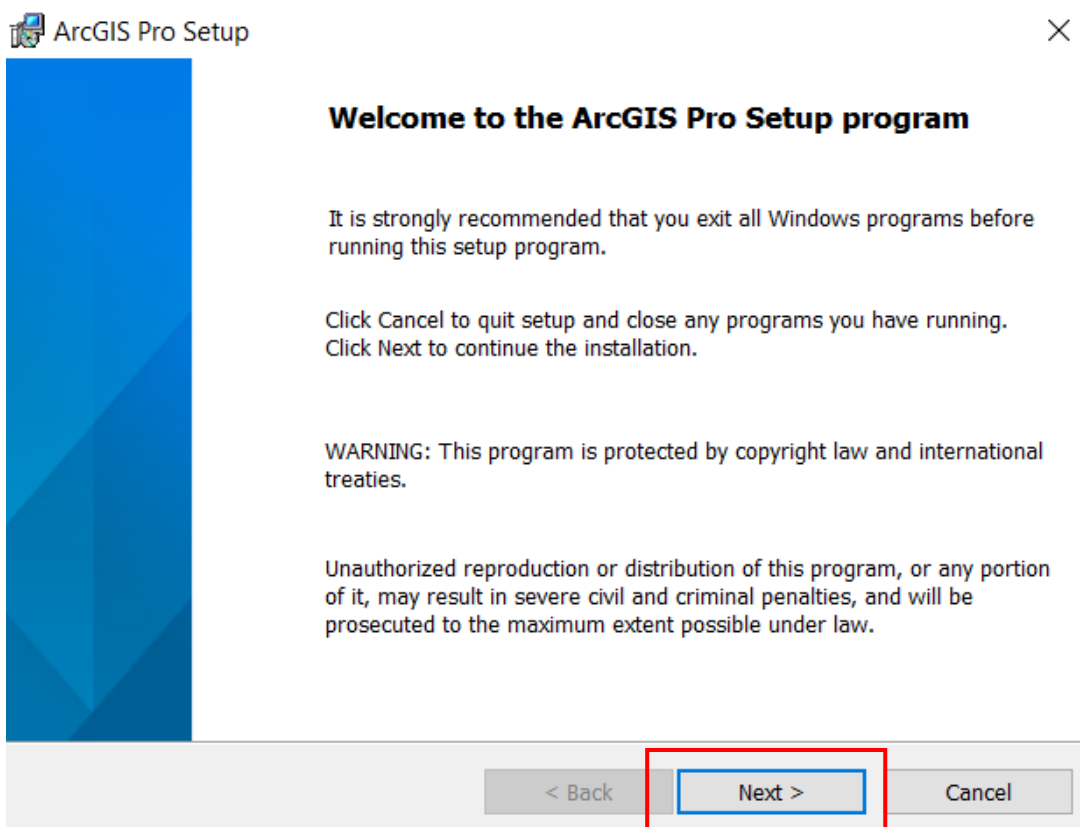

Select the destination folder for the files and confirm with Next.

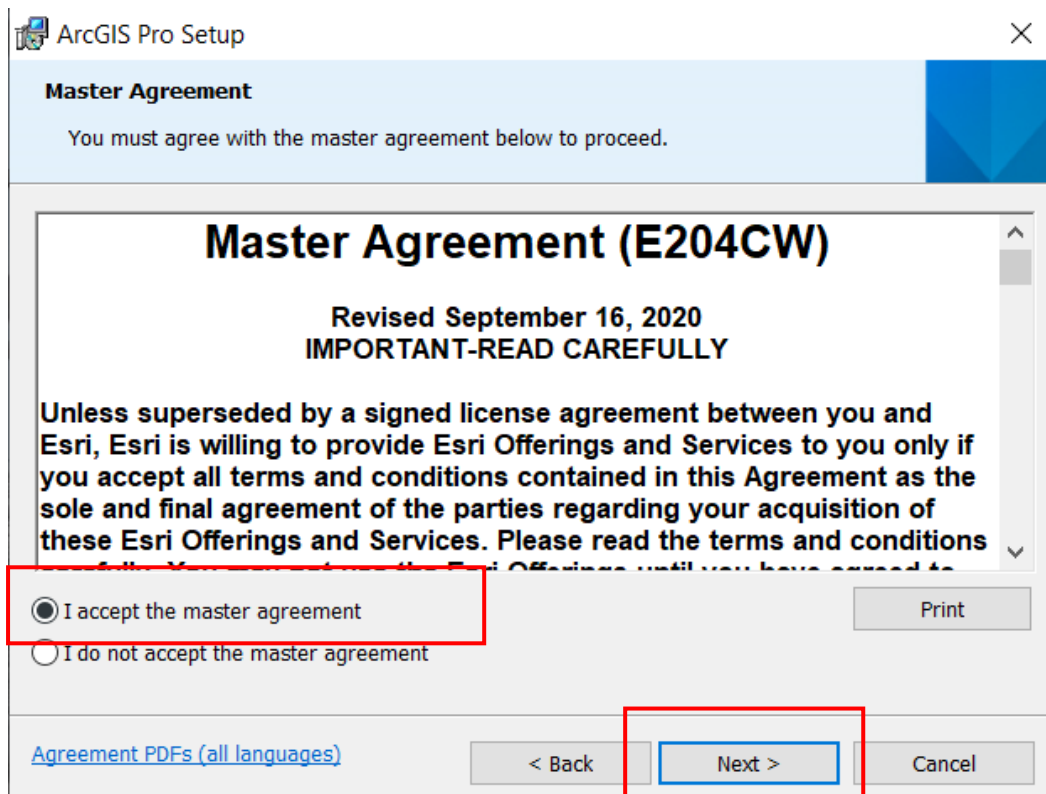

The files are now extracted. When the process is complete, you can start the setup programme with Close.

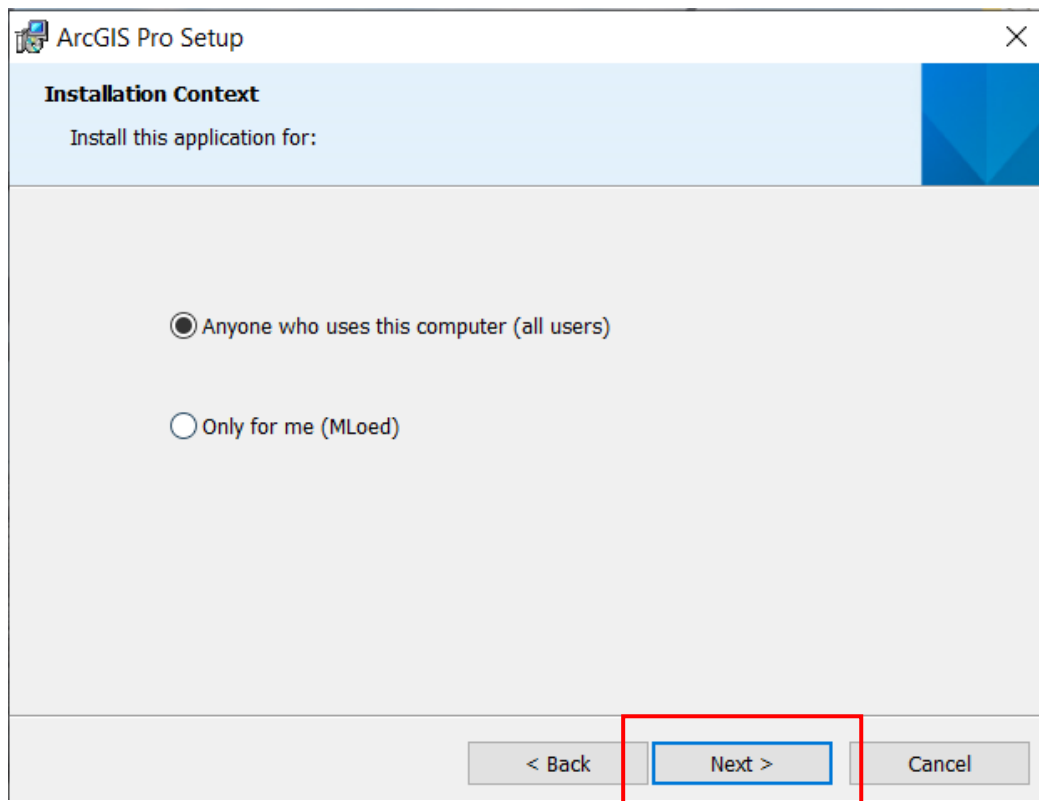

Click Next in the "Welcome to the ArcGIS Pro Setup program" window.

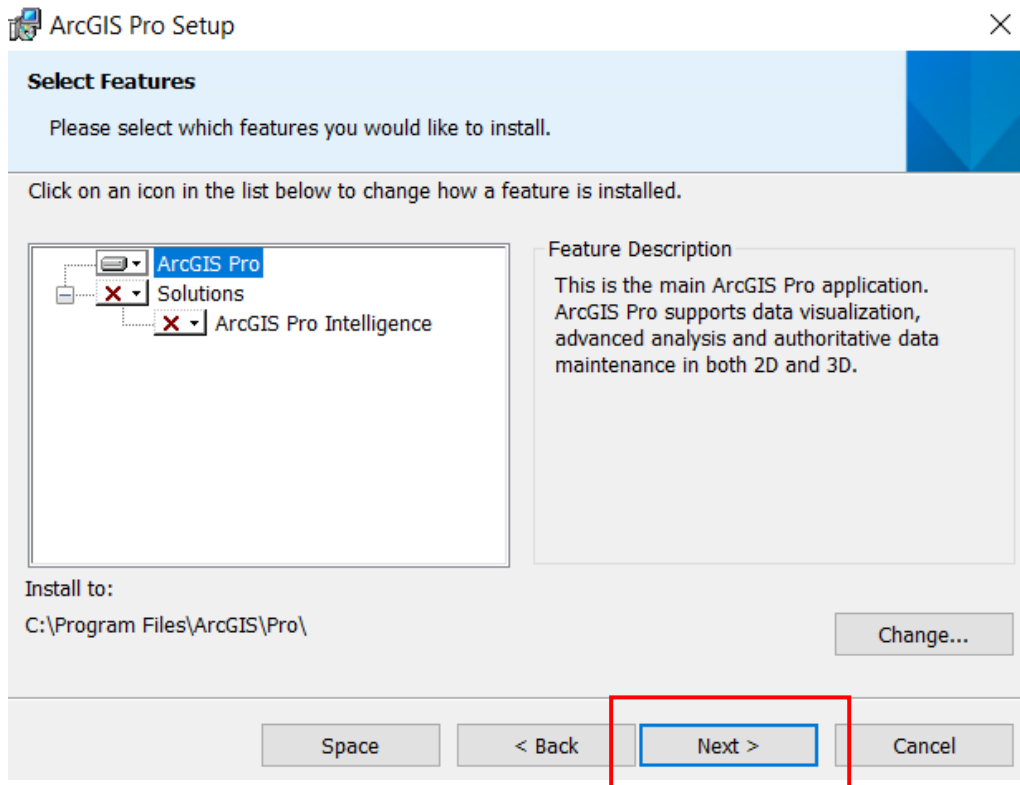

Accept the licence agreements and click Next.

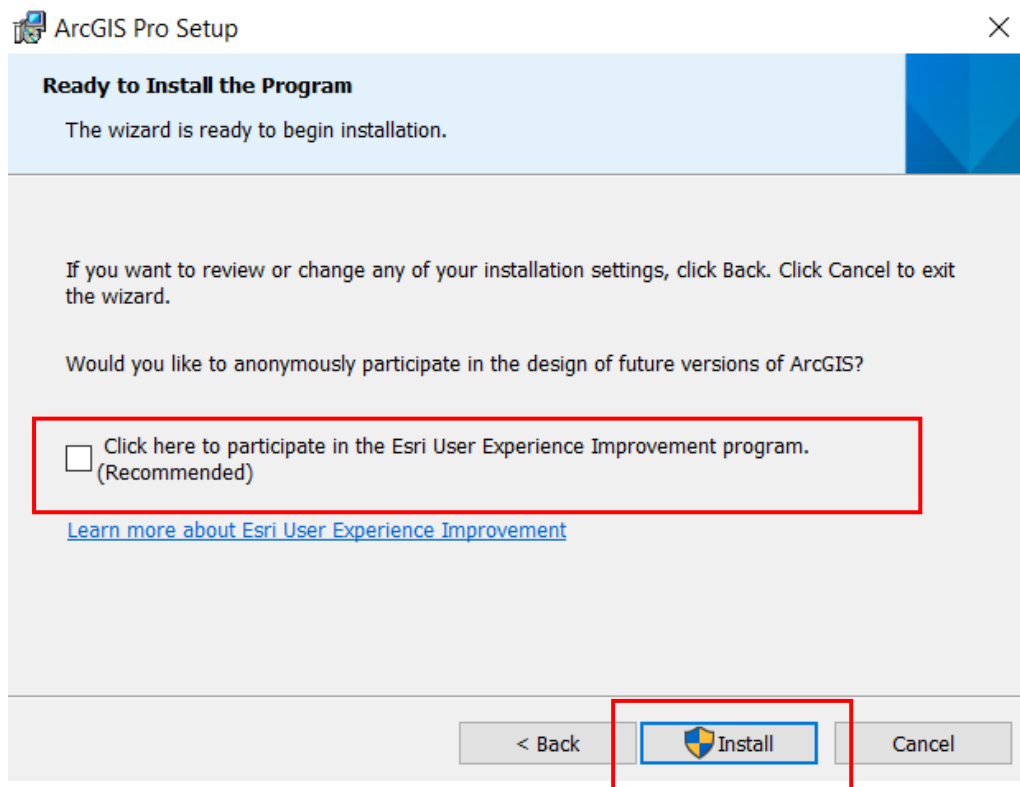

In the next window you can specify for which users ArcGIS Pro should be installed. Select the desired users and say Next.

In the next window you can select functions. Here you can accept the default settings and confirm with Next.

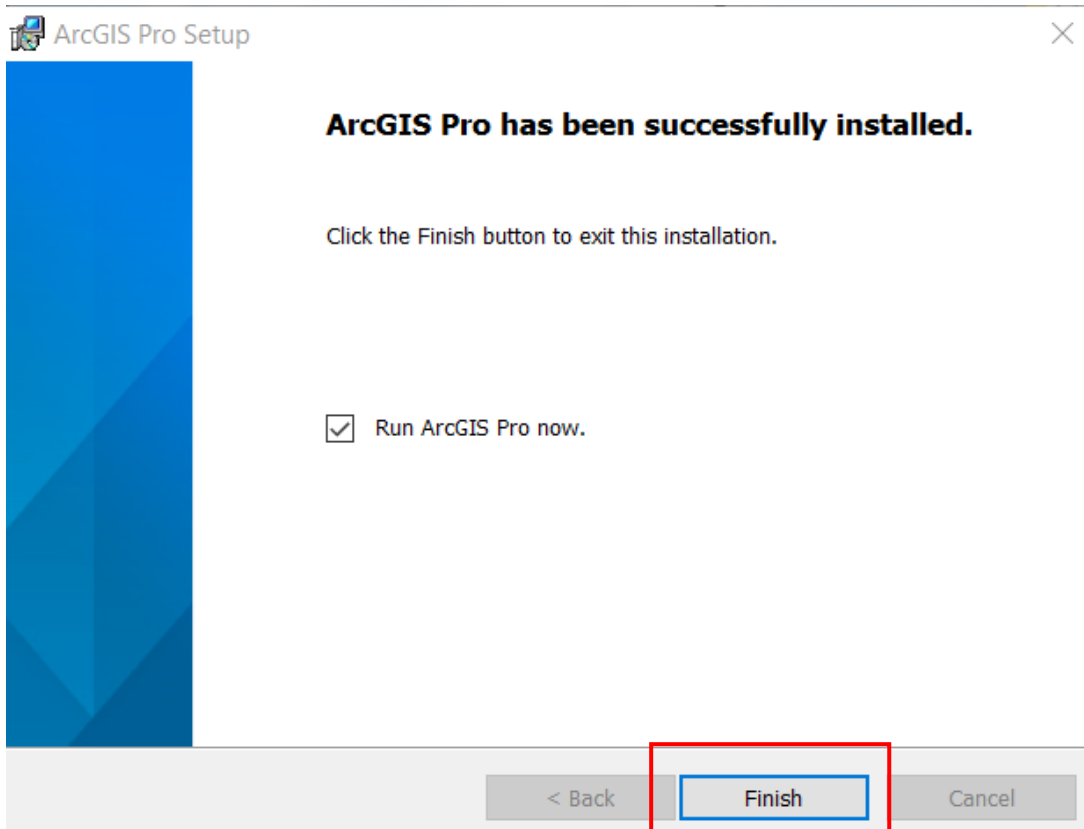

In the next step, click Install to start installing ArcGIS Pro on your computer. Optionally, you can check the box to participate in the ESRI User Experience Improvement Programme. This is not mandatory.

The installation will start and take a few minutes.

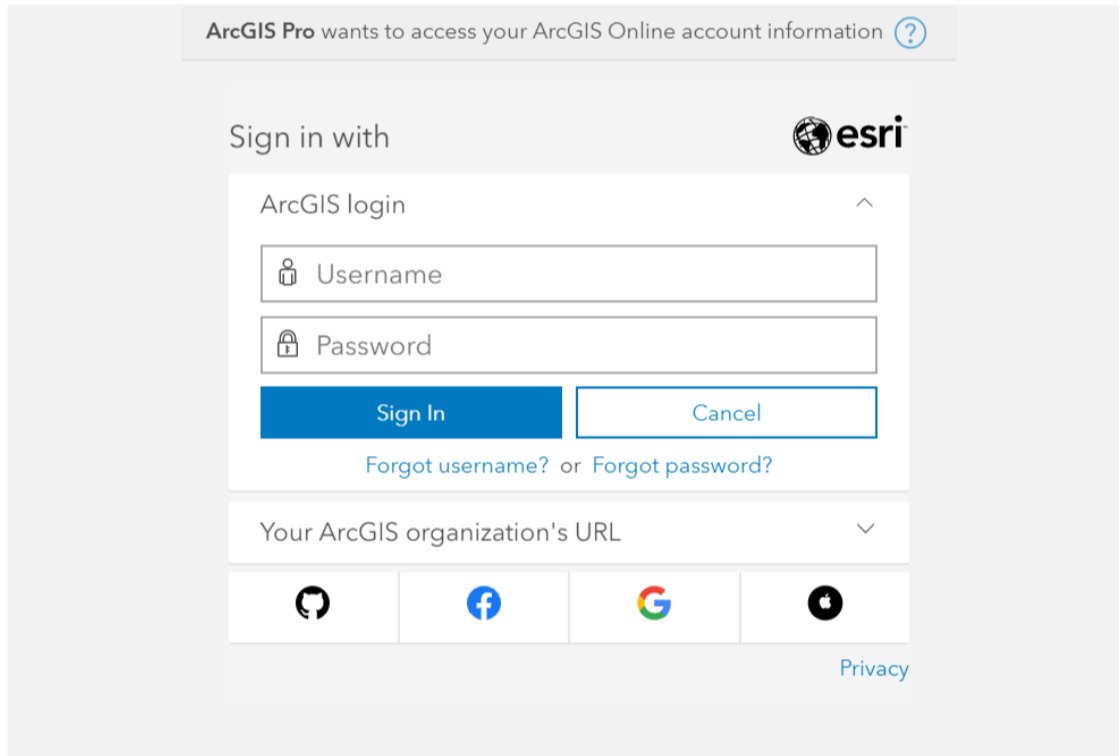

When the installation of ArcGIS Pro has been successfully completed, click Finish.

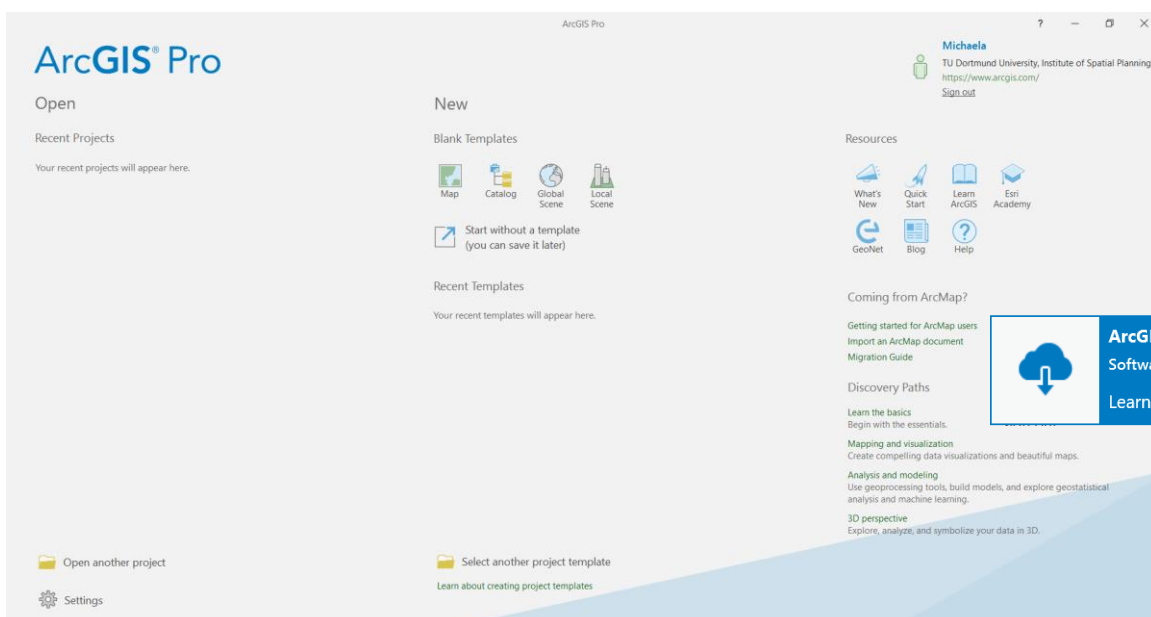

When the installation is complete, ArcGIS Pro opens and a login window appears. Here you must log in with your assigned account data.

Optionally, the licence type can be changed under *Configure your licensing options*. The Named User licence should be set as the default.

Sign me in automatically [Configure your licensing options](#)

After successful registration the starting screen of ArcGIS Pro opens. At the top right you can see your login. With the default setting, a hint for possible updates is given when newer versions appear, which you can execute via this. Accordingly, no new installation file is required for newer versions.

Installation and licensing of extensions

Several extensions are available for ArcGIS Pro (e.g. 3D Analyst, Data Interoperability, Network Analyst, Publisher, Spatial Analyst, ...). If you want to use extensions, the licence must be assigned to you by the administrator (Marius Trzecinski, Mathias Schaefer).

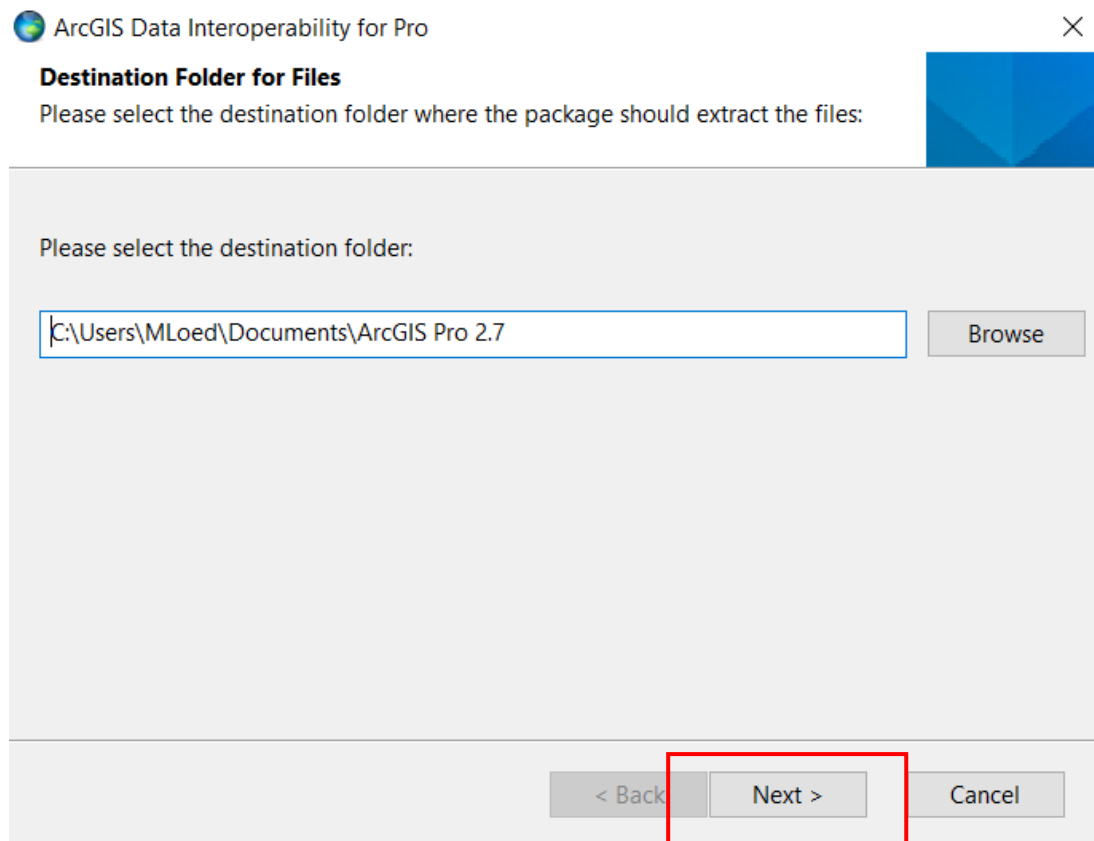

Data Interoperability

The Data Interoperability for Pro extension is an integrated spatial extraction, transformation and loading (ETL) toolset that runs in the geoprocessing environment using Safe Software's FME technology. This allows you to integrate data from multiple sources and with multiple formats and provides access to the FME Workbench application. To use the Data Interoperability Tools, you must also perform an installation. You can obtain the installation file, as described above, from My ESRI or on request from the RIM department.

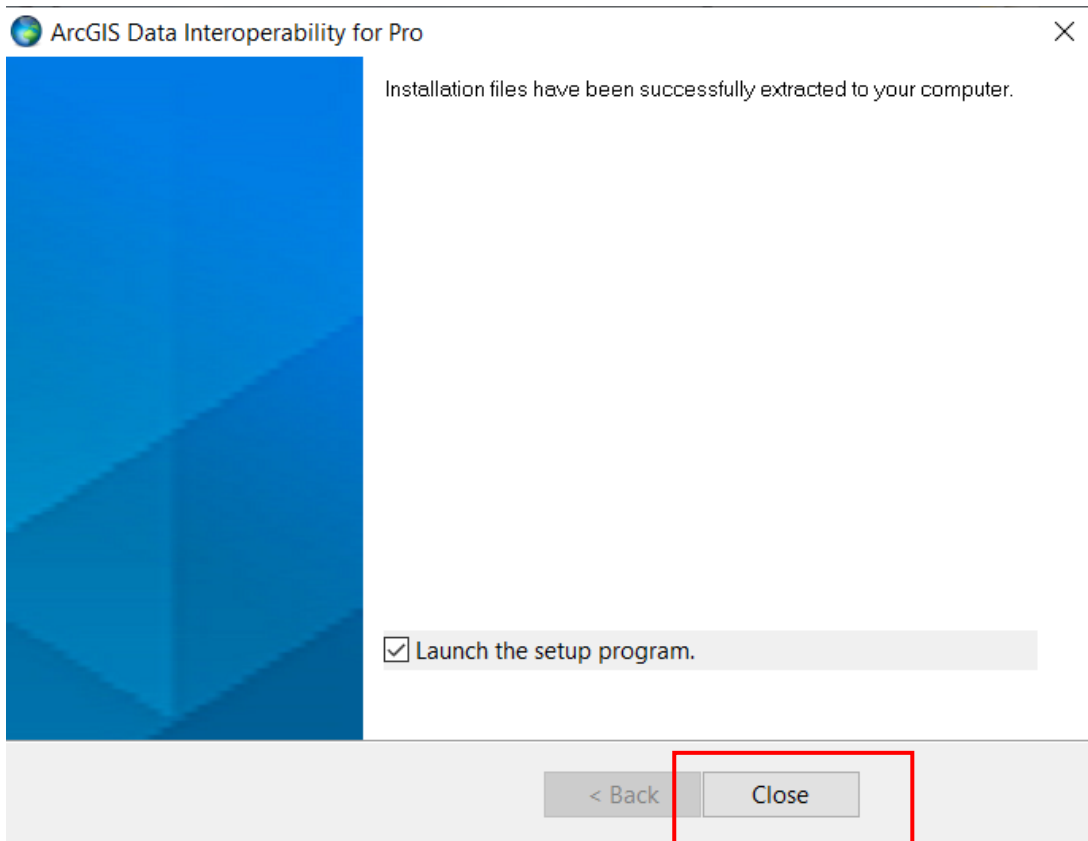

To install, run the application.

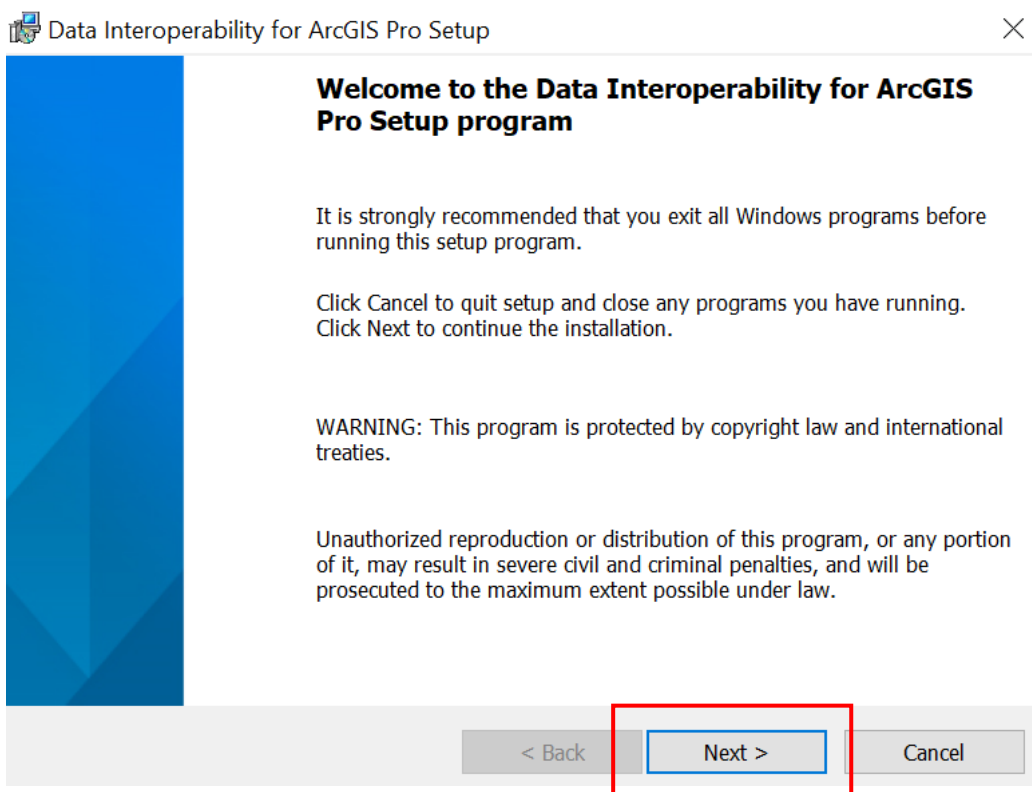

Select the destination folder for the files and confirm with Next.

The files are extracted. When the process is complete, you can start the setup programme with Close.

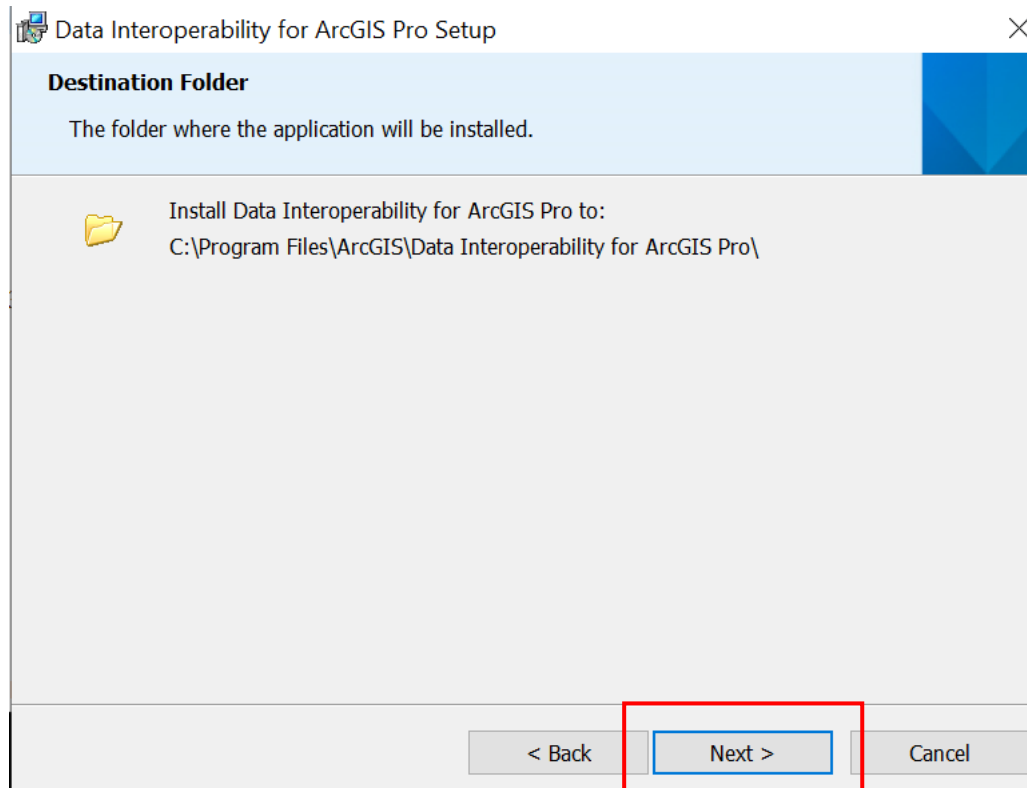

In the "Welcome to the Data Interoperability for ArcGIS Pro Setup program" window, click Next.

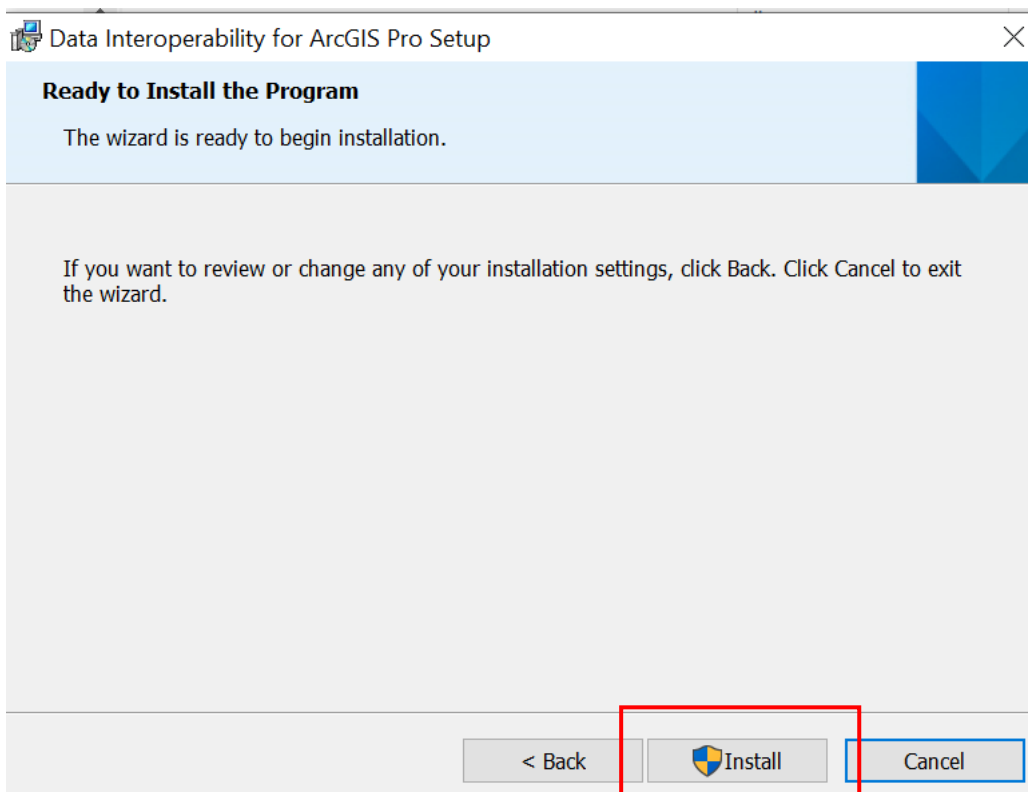

Accept the licence agreements and click Next.

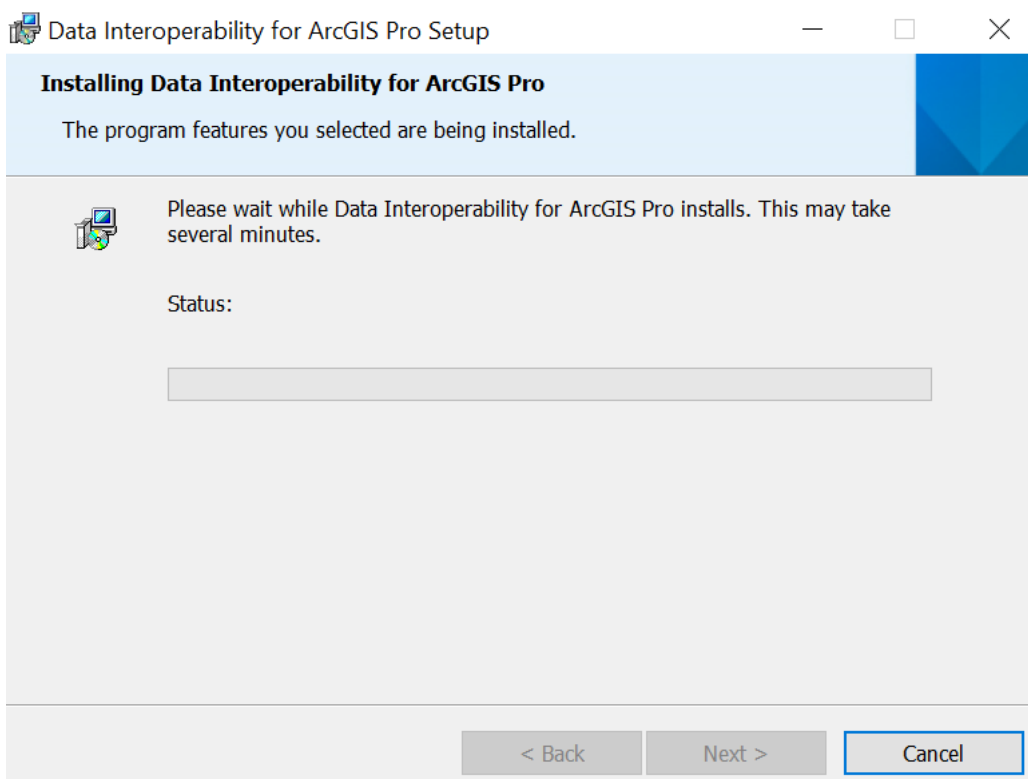

In the next window, confirm the destination folder with Next.

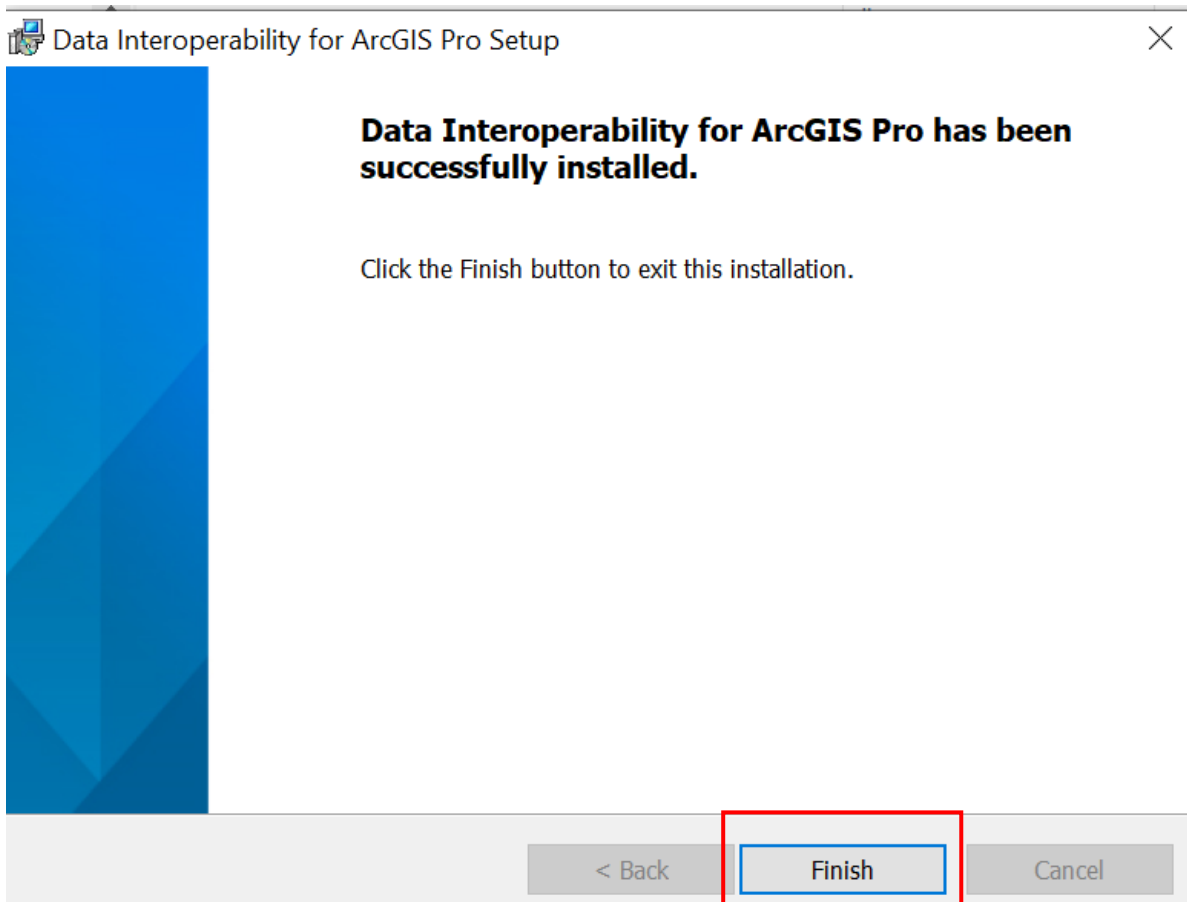

Start the installation.

This may take a few minutes.

When the process is complete, confirm with Finish.

The Data Interoperability Tools are now available under Toolboxes in ArcGIS Pro.
